Subject : Further communication related to the exit of XH 130 A/B

Dear Valued Customer,

Following REACH regulations the Swiss legislation list of the substances subject to authorization (Annex XIV REACH) has been amended, thus it was the decision in early 2014 to exit the products with in-house DDM base hardeners and it was also the decision of not looking for replacement with external supply.

Stock had been made to provide time for customers to look for other alternatives. Amid the last stock of XH 130 A/B that had been finishing as communicated early this year, hopefully alternatives have been identified.

ARALDITE® AY 133 / HARDENER HY 133 LP can be considered as a replacement of certain applications that used to be made with XH 130 A/B. Technical data sheet of ARALDITE® AY 133 / HARDENER HY 133 LP is available upon enquiry for better understanding and perusal

Should you need any technical advice or further enquiry, please contact our local commercial representatives.

Sincerely,

Huntsman Advanced Materials
